

### Locations

The locations in red circles are the planned location throughout the valley. Listed below are the explanation and location strategy:

#### 1. CASS – Capacity 700-1000

This location is currently operating and should still be utilized for the homeless in the valley. The only change would be to not force people on-the-street during the day. The heat is dangerous and an unhealthy practice.

#### 2. SUN - Capacity 1000

This Sunnyvale section would be used for the north area. People with jobs in the area could have a commute to their current occupation.

#### 3. Tonto - Capacity 1000

This area serves the east valley. Tonto can be in East Mesa or Apache Junction. There are many properties that are abandon and can be used as facilities.

#### 3. New Beginnings Ranch - Capacity 5000

This will be the main facility. It will temporarily house most of the homeless and be full services. All relevant services will be present on-site.

### Other Area Location

#### Flagstaff

Flagstaff will continue with its current facilities. The facility will be extended to accommodate more people and start providing other services. There will be no sending people out after nighttime. Once you are a member, they will maintain service all day.

#### Tucson

Tucson will keep it's current facilities and expand consistent with the Maricopa model.

#### Bullhead City

Bullhead has a disproportionate amount of homeless as compared to other areas. Camp David will be used to build the facility consistent with the Maricopa model.
