

Medical Synergy

Overview: Synergistic benefits with the medical community are critical. Most homeless people need medical attention. Nowadays, they get attention when they get sick from "street life". The costs are enormous, both in terms of personal health and the financial cost to the hospital. Since this area affects everyone, below is an overview of the main steps needed to resolve the issue.

First, awareness and information

We (all of us) should have access to who manufactures, sells and evaluates the product. Understanding the product's disadvantages, benefits, uses and pricing is not a HIPAA violation. They hide this information so they can raise the price without consequence. In fact, their price has been rising for so long and without control. It's time to bring things back to basic supply and demand. Let's start with some good valuable published information which is key.

Second, handle financial disadvantage situations

For the general Population, people in a weaker economic position, will be identified and be provided a card where they can buy the needed medicine from their local pharmacy at manufacturer's cost. For the homeless medicine can be provided for free at the facilities. It's inexcusable that companies promote human kindness and caring while being indifferent to people and their needs.

This is not some political ideology; people are, in reality, suffering and dying from not having access to life saving drugs. Combating the indifference starts with good information, like we demand from all other industries.

Third, call to action

Medical Industry: Every Doctor should be required as part of license to volunteer for the camp where homeless and other disadvantaged people can get medical treatment. This would not require much time from Doctors. Every town, city, or metro has enough doctors to cover requirements easily without much effort. Please keep in mind they take an oath and are bound by license to fulfill it.

Forth, re-organize insurance

Insurance Industry: If a customer has insurance, they are insured. No more conditions, either the person has insurance, or they don't. Medical costs are covered period
